

Daily activities affect water quality if we don't make good choices.

When water from irrigation and rain washes over yards and streets, it collects fertilizers, pesticides, soap, oil, pet waste and other pollutants. The runoff flows into storm drains untreated and ends up polluting the nearest stream, lake or wetland.

What's the Problem With Nutrients?

Nutrients from fertilizers, pesticides and soap can cause excess algae to grow in our waterways.

Over application of fertilizers and pesticides can result in runoff that carries toxic levels of chemicals or excessive nutrients into our waterways.

Too much algae harms water quality and impacts aquatic life, wildlife and people who recreate and fish.

Don't Feed Storm Drains

Prevent materials and pollutants from reaching the storm drain.

Stormwater runoff from rain and snow/ice melt picks up materials on the ground before entering the storm sewer and discharges them untreated directly into our waterways.

Not in Storm Drains!

- Oil
- Pesticides
- Fertilizer
- Paints
- Soaps
- Solvents
- Green Waste

How You Can Help:

1. Pick Up Pet Poop

Pet waste can flow into storm drains and spread bacteria.

2. Fix the Oil Leak

Car leaks can spread oil into the water supply. One pint of oil can make a slick larger than a football field.

3. Direct Your Downspouts

Point downspouts toward the lawn or plants, not the sidewalk.

4. Sweep

Sweep up dirt and debris. Dirt on sidewalks and streets wash into the storm drain and pollute our water.

5. Compost

Compost and amend soil. Healthy soil acts as a water filter.

6. Use Fertilizers and Pesticides Sparingly

Follow Instructions | Go Natural | Do not use before it rains or snows

7. Use a Commercial Car Wash

Colorado Water is Important to All of Us! So Live Like You Love It.
